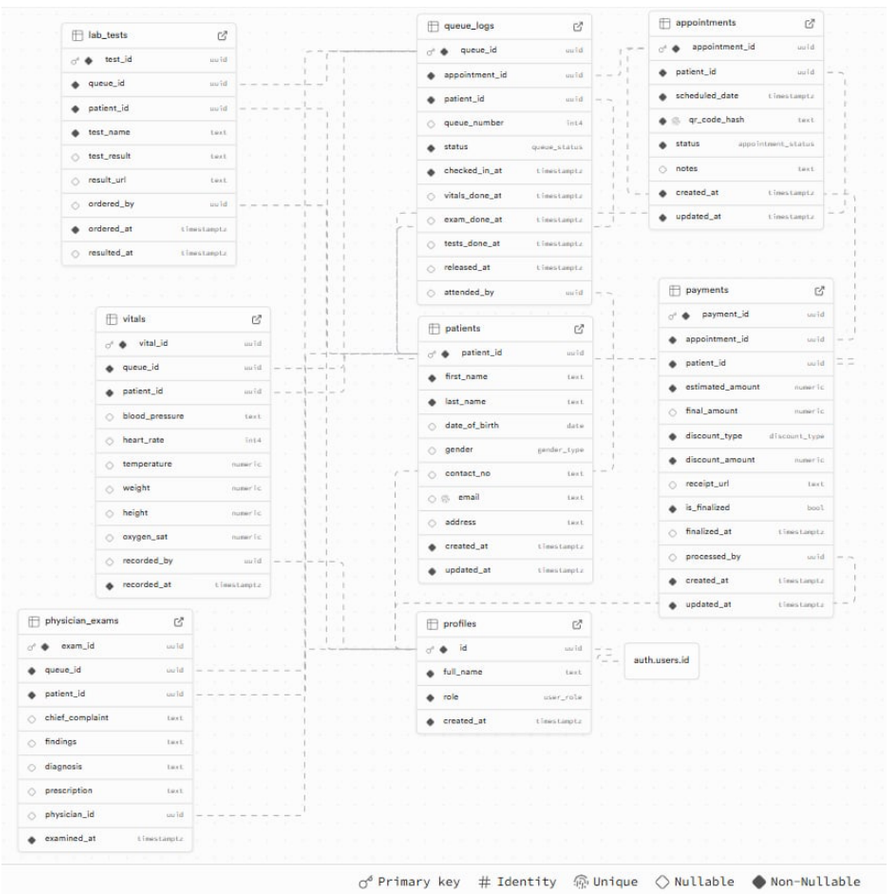
The Refined Data Entities

Our ERD necessitates these particular "bridge" tables.


- **Appointments Table**: This is the "Online" part. It generates the **QR Code** upon completion.
  - Fields: appointment_id, patient_id, scheduled_date, qr_code_hash, status (Pending/Checked-In).
- **Queue_Logs Table**: This handles the **Live Queue w/ QR**.
  - Logic: When the clinic scans the patient's QR code, a record is created here to start the "Standard Procedure" flow.
- **Payments Table:** Handles the Rough estimate vs. Finalized Receipt.
  - Fields: estimated_amount, final_amount, discount_type (e.g., Senior/PWD), receipt_url (link to the generated PDF), is_finalized.
